Introduction

Overview

Applications

Monitoring and auditing

A CT log implementation

Detection

- ▶ **Protection is hard**
- ▶ ...let's detect more
- ▶ Both for protecting the next
- ▶ ...and for deterrence

Detection

- ▶ Protection is hard
- ▶ ...let's detect more
- ▶ Both for protecting the next

Introduction

Overview

Applications

Monitoring and auditing

A CT log implementation

An introduction to public, append-only, untrusted logs.
A log is a database with log entries.

Public

- ▶ Anybody can retrieve a log entry
- ▶ In some systems anybody can submit log entries
- ▶ ...in which case spam countermeasures is a good idea

Public

- ▶ Anybody can retrieve a log entry
- ▶ In some systems anybody can submit log entries
- ▶ ...in which case spam countermeasures is a good idea

Public

- ▶ Anybody can retrieve a log entry
- ▶ In some systems anybody can submit log entries
- ▶ ...in which case spam countermeasures is a good idea

Append-only

- ▶ Entries can be added but never changed or removed
- ▶ A pretty specialised database
- ▶ Poses some operational challenges

Append-only

- ▶ Entries can be added but never changed or removed
- ▶ A pretty specialised database
- ▶ Poses some operational challenges

Append-only

- ▶ Entries can be added but never changed or removed
- ▶ A pretty specialised database
- ▶ Poses some operational challenges

Untrusted

- ▶ Important, to avoid “just another key”
- ▶ A lying or compromised log will get caught

Untrusted

- ▶ Important, to avoid “just another key”
- ▶ A lying or compromised log will get caught

A solution

- ▶ **Merkle tree**
- ▶ Signed tree heads
- ▶ The need for a quick proof of inclusion – signed timestamps
- ▶ Auditing is crucial

A solution

- ▶ Merkle tree
- ▶ Signed tree heads
 - ▶ The need for a quick proof of inclusion – signed timestamps
 - ▶ Auditing is crucial

- ▶ Signed tree heads
- ▶ The need for a quick proof of inclusion – signed timestamps
- ▶ Auditing is crucial

Introduction

Overview

Applications

Monitoring and auditing

A CT log implementation

What append-only logs can be used for.

X509 certificates, a.k.a. CT

- ▶ **Certificate Transparency, RFC 6962**
- ▶ Anybody can (and CA:s should) submit certs to logs
- ▶ Browsers require certs to be logged
- ▶ Monitors keep logs honest
- ▶ Signed Certificate Timestamps for quicker “proof”
- ▶ Enabling site owners, who are the ones who really know about issuance

X509 certificates, a.k.a. CT

- ▶ Certificate Transparency, RFC 6962
- ▶ Anybody can (and CA:s should) submit certs to logs
- ▶ Browsers require certs to be logged
- ▶ Monitors keep logs honest
- ▶ Signed Certificate Timestamps for quicker “proof”
- ▶ Enabling site owners, who are the ones who really know about issuance

X509 certificates, a.k.a. CT

- ▶ Certificate Transparency, RFC 6962
- ▶ Anybody can (and CA:s should) submit certs to logs
- ▶ Browsers require certs to be logged
- ▶ Monitors keep logs honest
- ▶ Signed Certificate Timestamps for quicker “proof”
- ▶ Enabling site owners, who are the ones who really know about issuance

- ▶ Browsers require certs to be logged
- ▶ Monitors keep logs honest
- ▶ Signed Certificate Timestamps for quicker “proof”
- ▶ Enabling site owners, who are the ones who really know about issuance

Binary Transparency

- ▶ **Am I running the same code as everybody else?**
- ▶ Any binary, including typically closed firmware
- ▶ ...but also code like JavaScript
- ▶ Goes especially well with reproducible builds

Binary Transparency

- ▶ Am I running the same code as everybody else?
- ▶ Any binary, including typically closed firmware
- ▶ ...but also code like JavaScript
- ▶ Goes especially well with reproducible builds

Binary Transparency

- ▶ Am I running the same code as everybody else?

Binary Transparency

- ▶ Am I running the same code as everybody else?
- ▶ Any binary, including typically closed firmware
- ▶ ...but also code like JavaScript
- ▶ Goes especially well with reproducible builds

DNSSEC Transparency

- ▶ **Lots of keys in DNSSEC**
- ▶ Especially the DS records should be watched, to detect misissuance by parent zone
- ▶ See draft-zhang-trans-ct-dnssec

DNSSEC Transparency

- ▶ Lots of keys in DNSSEC
- ▶ Especially the DS records should be watched, to detect misissuance by parent zone
- ▶ See [draft-zhang-trans-ct-dnssec](#)

DNSSEC Transparency

- ▶ Lots of keys in DNSSEC
- ▶ Especially the DS records should be watched, to detect misissuance by parent zone
- ▶ See draft-zhang-trans-ct-dnssec

Tor Consensus Transparency

- ▶ Tor consensus documents are trusted if they're signed by five keys
- ▶ Logging consensus documents would increase the chances of detecting an attack against a subset of the users
- ▶ Directory caches could act as log auditors with help from clients
- ▶ See "Tor Consensus Transparency proposal"

Tor Consensus Transparency

- ▶ See “Tor Consensus Transparency proposal”

System logs

- ▶ **Also known as syslog**
- ▶ Probably not public
- ▶ ...but append-only and untrusted
- ▶ Useful for forensics
- ▶ See Crosby and Wallach 2009

System logs

Notary services

- ▶ **Diplomas from online courses**
- ▶ Timestamp service
- ▶ Tax office has seen a receipt
- ▶ Tracking legal documents like consent receipts

Introduction

Overview

Applications

Monitoring and auditing

A CT log implementation

Monitoring, introduction

- ▶ **Log auditing ensures that the log behaves correctly, i.e.**
 - ▶ does include submitted entries in the log, on time
 - ▶ doesn't change or remove any entries
- ▶ Log monitoring cares also about the contents of the log

Monitoring, introduction

- ▶ Log auditing ensures that the log behaves correctly, i.e.

Monitoring, introduction

- ▶ Log auditing ensures that the log behaves correctly, i.e.
 - ▶ does include submitted entries in the log, on time
 - ▶ doesn't change or remove any entries
- ▶ Log monitoring cares also about the contents of the log

Temporal

Verifying log consistency over time

- ▶ An inclusion proof shows that a given entry is indeed part of a given tree
- ▶ Auditors send a log index I and a signed tree head STH and
- ▶ ...receive the nodes needed to calculate STH given entry number I

Temporal

Verifying log consistency over time

- ▶ An inclusion proof shows that a given entry is indeed part of a given tree
- ▶ Auditors send a log index I and a signed tree head STH and
- ▶ ...receive the nodes needed to calculate STH given entry number I

Temporal

Verifying log consistency over time

- ▶ An inclusion proof shows that a given entry is indeed part of a given tree
- ▶ Auditors send a log index I and a signed tree head STH and
- ▶ ...receive the nodes needed to calculate STH given entry number I

Temporal (cont.)

- ▶ A consistency proof shows that a given signed tree head STH_1 is a subset of another given signed tree head STH_2
- ▶ Auditors send two tree sizes, l_1 and l_2 , representing STH_1 and STH_2 and
- ▶ ...receive the nodes required to verify that the first l_1 entries are equal in both trees
- ▶ Consistency proofs also makes it possible to discard old tree heads once they've been verified

Temporal (cont.)

- ▶ A consistency proof shows that a given signed tree head STH_1 is a subset of another given signed tree head STH_2
- ▶ Auditors send two tree sizes, l_1 and l_2 , representing STH_1 and STH_2 and
- ▶ ...receive the nodes required to verify that the first l_1 entries are equal in both trees
- ▶ Consistency proofs also makes it possible to discard old tree heads once they've been verified

Temporal (cont.)

- ▶ Consistency proofs also makes it possible to discard old tree heads once they've been verified

Spatial

Verifying log consistency in space, i.e. the same log being shown to all parties

- ▶ A log could fork the tree and serve certain clients a different view
- ▶ This is detected by clients gossiping about their view of the log
- ▶ Not specified how this should be done yet, but see [draft-linus-trans-gossip-ct](#) for a suggestion
- ▶ Except it lacks gossiping of STH's

Introduction

Overview

Applications

Monitoring and auditing

A CT log implementation

catfish design

- ▶ **NORDUnet is developing a CT log as part of a GÉANT project**
- ▶ Free software, written in Erlang
- ▶ Modular – build other transparency systems
- ▶ Distributed – scalability and participation across organisational boundaries
- ▶ Expecting moderate write load (submit, 0.1 qps) and very high read load (queries, 7-20k qps)
- ▶ HSM support
